# How we work

We believe that **best results** arrive from close cooperation, trust and an empirical approach. We always value **straightforward conversation** over communication via issue trackers or **project documentation**.

We build **great products** through close relations and we believe candor is fundamental for that. We keep all the information in the open and give you **access** to source-code, timesheets, project management software. You'll accounts and PMs will **love that**.

# Our experience

# Tribal

*„Within **3 weeks** of receiving the brief Codewave assembled a team and began development. 4 weeks later the project was ready to launch, but we encountered some issues with Client’s internal IT and had to work around that.*

*Codewave’s tech lead was happy to join during several calls and work out the technical details with the Client’s tech representative - we really appreciated it and it made the go-live part a lot less complicated.”*

**Miranda Ossolinski**

## How IAMS built a new dog breed selector with Tribal and Codewave

Codewave created a complete recommendation system that helps people decide what breed would be most compatible with their needs and lifestyle.

Thanks to the fact that we operate our own infrastructure it's a lot easier for us to kick-off projects and work out the integration details for the go-live phase. We often help internal IT teams with the process or work around their limitations on our end to make go-lives smoother. It's very different from what most companies do during hand-off, when they literally hand the project over and let the PMs worry.

# Warner bros

*„The experience Of working with them was extreme, in a truly positive way. They assembled a prototype extremely fast and it was extremely scary! It helped us work out the final shape of the project with the client, who modified the scope several times, based on legal and PR recommendations.*

*They also took away the pain during the project's launch by taking over the communication with Client's IT support, which was based in India.”*

**Jason Sawtelle, Brigade Marketing**

## Building a voice altering app for Warner Bros' movie

In 2016, before The Conjuring 2 hit the box office, Brigade marketing was tasked with building an online app that would accompany the movie's massive promo. The app's intent was to record user's voice, transform it to sound as if a demon would say it and then let people enter a phone number that the app would call and play the demonic recording to.

Utterly creepy, but so cool!

Brigade did not have the capacity to build that internally at that time so we provided a team of skilled front end developers and a senior engineer with Voice over IP (VoIP) experience.

We all had a lot of fun building the Demonizer app for Warner Brothers. However, in the end, Legal did not approve on the telephony integration part - we still made the recordings sound quite scary and you could download them and play it over the phone.

SOFTWARE HOUSE

# Who we are

**Over 200 successful projects.**

Working with **creative agencies** and their clients.

Building and maintaining **custom** systems since 2003.

Specializing in both quick, **short-term marketing campaigns** and nimble, long-term cyclical projects.

**CodeWave**  
SOFTWARE HOUSE

# Why us

## We have

- **experience** building **tailored systems**.
- a core **CMS tool ready** to be adapted to any set of requirements.  
<https://vimeo.com/codewave>
- **vast experiences** to draw from, working with creative agencies **since 2003**.

## We know how to

- work with clients located in **different timezones**.
- do **DevOps**, we **support** our systems and infrastructure.
